FOREWORD

I would like to congratulate the Health Working Group (HWG) of the Association of International Non-Governmental Organisations in Nepal (AIN), for publishing the mapping of contributions of its member INGOs in the health sector.

The role of the highlighted INGOs in translating the priorities of the Government of Nepal (GoN) to implementation is commendable. When a system is driven by multiple forces— the Nepali health system—it can lead to confusion and discrepancies, due to lack of systemic information. Embarking upon the importance of strengthening the information system, this initiative taken by AIN is essential, as it captures the cumulative impact of its member INGOs and presents a collective vision of health equity in Nepal.

The wealth of information presented in this report including the updated status of program areas, major priorities, geographical distribution and financial contribution of INGOs in the health sector for the years 2017 and 2018, is quite resourceful. The document will be crucial in effective planning and execution for all stakeholders, including Ministry of Health and Population, other relevant ministries, provincial and municipal government bodies, and development partners. It will also serve to avoid programmatic and geographical duplication, further aiding in proper utilization and channeling of available resources across the country.

This document has come at a time, when the health system is being transformed to a decentralized federated structure. I am hopeful this document will be supportive in mitigating challenges at central as well as at local levels for health policy and governance. I appreciate the efforts of AIN Health Working Group for compiling, publishing and making this report publicly available, which I am confident, will be very resourceful for a range of audience at national and global levels.

Best Compliments,

Mahendra Prasad Shrestha

Chief, Health Coordination Division

Ministry of Health and Population

Acknowledgements

On behalf of AIN, it gives us immense pleasure to present the “AIN Members’ Contribution toward Health Sector Development in Nepal 2016-2018”. This is the continued effort of AIN Health Working Group (HWG) to showcase and document technical and financial contributions made by the AIN members in the health sector.

The Government of Nepal has well appreciated the role of INGOs and civil society organizations in accomplishing the results and outputs set by the Nepal Health Sector Strategy (NHSS, 2015-2020). The AIN HWG has been supporting the Government of Nepal and working in collaboration with them to achieve the targets set by the NHSS and the SDGs. However, in the absence of proper documentation, it has been challenging to realize the exact contribution made by AIN member INGOs in the health sector. In this regard, the mapping of the AIN members’ contribution in Nepal’s health sector, initiated by the HWG a few years ago, has been vital.

Today, we are challenged by the ever-evolving health care landscape that requires time, vigilance, dedication, and constant flow of new ideas to shape the pathway towards attaining audacious goals, as detailed in the SDGs, as well as in the NHSP III. The extensive information presented in this report will be particularly important for the government at all levels and other stakeholders to constructively leverage learning experiences, strengthen the collaboration continuum, and plan for future activities, ultimately devising a strategic plan for efficient health management. Further, we are also convinced that this initiative of the HWG will help bring visibility, transparency, and promote collaboration among various stakeholders as needed.

We, therefore, would like to extend our sincere gratitude to all the members of the AIN HWG for their active support in providing the requested information for this report, along with their valuable suggestions in bringing this report out. We would also like to take this opportunity to thank the Ministry of Health and Population, and other government entities at all levels for their continued support toward our common goals. We are equally grateful towards the donor community for providing development grants to INGOs working in Nepal. We would also like to express our heartfelt appreciation to Nirmala Sharma, Country Director, Fairmed and Reshma Shrestha, Program Coordinator, AIN Secretariat, for their invaluable support in bringing this document in shape.

Lastly, we would also like to express gratitude to Pratik Chhetri, the consultant who helped compile this report in its current form. The level of meticulous details he put into the report, the amount of perseverance he showed in coordinating with 41 different member INGOs and making sure the information in the report are presented in a way that is locally as well as globally relevant and understandable, is very commendable.

I. INTRODUCTION

Association of International NGOs, AIN

The Association of International NGOs, AIN is a network of international non-government organizations (INGOs) working in Nepal. AIN was founded in September 1996 primarily to serve as a common platform for members to discuss and share mutual issues and learn from each other. Currently AIN has a membership base of 138 INGOs working on a wide range of issues making noteworthy contributions to development efforts all across Nepal.

As the representative of INGOs in Nepal, AIN also provides critical policy feedback to the Government of Nepal (GoN), local government bodies and other stakeholders, wherever necessary.

Exhibit 1. Mission and Objectives of AIN¹

AIN Mission

“AIN aims to support the development efforts in Nepal by promoting an enabling environment for its members to fulfill their mission and providing policy feedback to the government.”

AIN Objectives

The objectives of AIN as articulated in its Association of Articles are to:

1. Engage and coordinate with other development and humanitarian actors, including government bodies, NGOs, NGO associations, and funding partners;
2. Continue to improve systems towards increased accountability, transparency and diversity;
3. Have access to guidance and resources; and
4. Collaborate in areas of common interest

The Health Working Group (HWG)

Of the existing 12 working groups within AIN, the health working group (HWG) was formed in 2008. It works toward attaining health related goals of its member INGOs and provides a platform to frame and debate policies directly and indirectly related to health. The HWG contributes to further national health policy agenda through advocacy, and through engagement with various government entities, donor agencies, health facilities, NGOs, community organizations and other stakeholders. HWG has been actively engaged with the Ministry of Health and Population (MoHP) toward implementing and scaling up health-based activities nationally.

Health under SDGs and NHSS

‘The 2030 Agenda for Sustainable Development’² was adopted by all the United Nations member states in 2015, including Nepal. Among 17 broad Sustainable Development Goals (SDGs),

1. Strategic Plan 2017-2019, Association of INGOs in Nepal.

2. Sustainable Development Goals. United Nations, 2015. Available at: <https://sustainabledevelopment.un.org/sdgs>

SDG 3 represents 'Good Health and Well-Being'. However, all the other sixteen SDGs are also indirectly related to health. Therefore, the purview of AIN- HWG members encompasses not just the SDG 3, but also many of the other SDGs that comes up throughout this report.

Exhibit 2. List of Targets of Sustainable Development Goal³

SDG 3: Ensure healthy lives and promote well-being for all at all ages

Targets:

- 3.1** By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births.
- 3.2** By 2030, end preventable deaths of newborns and children under 5 years of age, with all countries aiming to reduce neonatal mortality to at least as low as 12 per 1,000 live births and under-5 mortality to at least as low as 25 per 1,000 live births.
- 3.3** By 2030, end the epidemics of AIDS, tuberculosis, malaria and neglected tropical diseases and combat hepatitis, water-borne diseases and other communicable diseases.
- 3.4** By 2030, reduce by one third premature mortality from non-communicable diseases through prevention and treatment and promote mental health and well-being.
- 3.5** Strengthen the prevention and treatment of substance abuse, including narcotic drug abuse and harmful use of alcohol.
- 3.6** By 2020, halve the number of global deaths and injuries from road traffic accidents.
- 3.7** By 2030, ensure universal access to sexual and reproductive health-care services, including for family planning, information and education, and the integration of reproductive health into national strategies and programmes.
- 3.8** Achieve universal health coverage, including financial risk protection, access to quality essential health-care services and access to safe, effective, quality and affordable essential medicines and vaccines for all.
- 3.9** By 2030, substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water and soil pollution and contamination.
- 3.A** Strengthen the implementation of the World Health Organization Framework Convention on Tobacco Control in all countries, as appropriate.
- 3.B** Support the research and development of vaccines and medicines for the communicable and noncommunicable diseases that primarily affect developing countries, provide access to affordable essential medicines and vaccines, in accordance with the Doha Declaration on the TRIPS Agreement and Public Health, which affirms the right of developing countries to use to the full the provisions in the Agreement on Trade Related Aspects of Intellectual Property Rights regarding flexibilities to protect public health, and, in particular, provide access to medicines for all.
- 3.C** Substantially increase health financing and the recruitment, development, training and retention of the health workforce in developing countries, especially in least developed countries and small island developing States.
- 3.D** Strengthen the capacity of all countries, in particular developing countries, for early warning, risk reduction and management of national and global health risks.

3. Goal 3. Sustainable Development Goals. United Nations. Available at: <https://www.un.org/sustainabledevelopment/health/>

The Government of Nepal (GoN) has also instituted its own set of interdisciplinary health-related goals, outcomes, and outputs in its guiding strategy document—the ‘Nepal Health Sector Strategy, 2015-2020 (NHSS)’. Also highlighted in this report are the NHSS goals, outcomes and outputs of all AIN-HWG members.

Exhibit 3. List of Goal Level Indicators and Outcomes, NHSS 2015-2020⁴

Goal: Improved health status of all people through accountable and equitable health service delivery system

<u>Goals</u>	<u>Indicators</u>	<u>Targets- 2020</u>
G1	Maternal mortality ratio (per 100,000 live births)	125
G2	Under five mortality rate (per 1,000 live births)	28
G3	Neonatal mortality rate (per 1,000 live births)	17.5
G4	Total fertility rate (births per women aged 15–49 years)	2.1
G5	% of children under-5 years who are stunted	31
G6	% of women aged 15-49 years with body mass index (BMI) less than 18.5	12
G7	Life lost due to road traffic accidents (RTA) per 100,000 population	17
G8	Suicide rate per 100,000 population	14.5
G9	Disability adjusted life years lost (due to Communicable, mater-nal & neonatal, non-communicable and injuries)	6,738,953
G10	Incidence of impoverishment due to OOP expenditure in health	Reduce by 20%

Expected Outcomes:

Outcome 1	Rebuilt and strengthened health systems: Infrastructure, HRH management Procurement and Supply chain management
Outcome 2	Improved quality of care at point-of-delivery
Outcome 3	Equitable utilization of health care services
Outcome 4	Strengthened decentralised planning and budgeting
Outcome 5	Improved sector management and governance
Outcome 6	Improved sustainability of health sector financing
Outcome 7	Improved healthy lifestyles and environment
Outcome 8	Strengthened management of public health emergencies
Outcome 9	Improved availability and use of evidence in decision-making processes at all levels

Nepal's Socio-Political Context & Health

A series of political transitions⁵ over the last 70 years has affected the country's socioeconomic status quite adversely. In 1951, the end of Rana regime marked the first step toward democracy. The 1990 revolution brought about the introduction of multi-party-political system, designating the monarch constitutional (as opposed to absolute), and was the next step toward democracy. Soon after, a decade of bloody civil war (1995-2006) left more than 16,000 dead. Then, the scandalous

4. Nepal Health Sector Strategy, 2015-2020. Ministry of Health and Population, Government of Nepal. 2015.

5. British Broadcasting Corporation, BBC. “Nepal profile- Timeline”. 2017. Available at: <http://www.bbc.com/news/world-south-asia-12499391>

Royal massacre in 2001 killing then King's immediate family rocked the nation aghast. The complete removal of monarchy in 2006-07 paved a way to current day 'Federal Democratic Republic of Nepal' in 2008. Frequent political before and since had still been an obstacle for Nepal's smooth transition to development. Furthermore, in 2015, the severely deadly earthquake killed more than 9000 Nepalis. This was immediately followed by an economic blockade by the Government of India. Combinedly, these two events contracted the nation's economic growth to 0.77%.⁶

On September 20, 2015, a new constitution-- "The Constitution of Nepal 2072" was finally promulgated by the President.⁷ The 2017-18 elections helped establish governments at local, provincial and national levels. As a result, there are now 753 municipal, 7 provincial and 1 central government bodies within the nation. Overall, this has provided a glimmer of hope for a long-term political stability in Nepal, even though clear divisions of roles and responsibilities are yet to be clarified among different levels of governments.

This socio-political turmoil over the past decades, coupled with problems such as corruption,⁸ has left the nation's economy substandard. Nepal is among 47 nations categorized as the 'Least Developed Countries (LDCs)'.⁹ The GDP per capita of Nepal for 2018 is only US\$ 849 (as compared to the global average of US\$ 17,300).¹⁰ The nationally defined poverty rate is still at 21.6 percent in 2015 (compared to 31 in 2004); the globally defined absolute poverty rate at US\$1.90 per person per day is about 36 percent.¹¹ Nepal's Human Development Index (HDI) is only still 0.574, 149th in the world.¹²

This picture makes it clear that extensive work needs to be done in the field of health in Nepal, amidst insurmountable challenges for the GoN, other local government bodies, and various stakeholders, including international NGOs, and other development organizations.

Health Priorities in Nepal

Article 35 of the 'Constitution of Nepal 2072'⁴ defines health as a fundamental right, ensuring "every citizen [of] the right to free basic health services". However, ensuring equitable basic health services is costly and take a lot of efforts. According to the 2016 World Health Organization (WHO)'s Global Health Expenditure Database,¹³ Nepal's total health expenditure is only \$50 per capita. And even though the percentage of government health expenditure (of the GDP) is slightly above the WHO recommendation (>5% of the GDP), there are myriad existing problems with health expenditure in Nepal—low GDP is the obvious one. A deeper dive into the numbers further indicate

6. Economic Survey 2016, Ministry of Finance, Nepal.

9. Least Developed Countries (LDCs), United Nations. Available at: <https://www.un.org/development/desa/dpad/least-developed-country-category.html>

10. Gross Domestic Product (GDP) per capita, Nepal- 2017. World Bank. Available at: <https://data.worldbank.org/indicator/NY.GDP.PCAP.CD?locations=NP>

11. Sustainable Development Goals 2016-2030: National Report. National Planning Commission, Government of Nepal, 2017.

12. Human Development Indicators, United Nations Development Program, 2018. Available at: <http://hdr.undp.org/en/countries/profiles/NPL>

13. World Health Organization. Global Health Expenditure Database - National Health Account Indicators. Available at: <http://apps.who.int/nha/database/Select/Indicators/en>

that 55% of the health expenditure of Nepal comes out of pocket (OOP) payments[ibid], which is extremely risky in terms of providing financial protection to the people from health costs. Further, up to 20% of the total expenditure comes from external funding agencies, adding uncertainty and barriers to long term goal setting in healthcare system in the country.¹⁴

Exhibit 4. Key Health Indicators of Nepal¹⁵

• Life Expectancy at birth:	70.25 yrs
• Maternal Mortality, per 100,000:	239
• Neonatal Mortality, per 1,000:	21
• Infant mortality, per 1,000:	32
• Vaccination, age 12-23 months:	78%
• Contraceptive Prevalence Rate:	53%

Despite a challenging healthcare system, Nepal has had quite a success in improving the health standards over the past few decades. Nepal's progress in lowering maternal and infant mortality under the Millennium Development Goals (MDGs) was a crucial step toward improved health.¹⁶ Immunization rates have nearly doubled since 1996 and are now at around 90% for both measles and DTP3 vaccines.¹⁷ Even though up to about 80% of health providers are private entities, the government still has a vertical integration of healthcare services for those provided at government run hospitals, clinics, health posts and other health facilities.¹⁸ This previously centralized healthcare system, primarily run by directives from the federal government's Ministry of Health (MoH) is changing, in alignment with the recently decentralized structure of power and governance mandated by the new constitution⁴. However, there are largely uncertainties over how the fully decentralized healthcare system will look like, or when it might happen.

The SDG Target 3.8 sets 2030 as a milestone to achieving **universal health coverage (UHC)**, with adequate "financial risk protection [and] access to quality essential health-care services".³ Toward achieving this goal, the federal Parliament has also passed 'Health Insurance Act 2074'¹⁹ in 2017. The actual path to actual UHC is quite treacherous and needs cross-sectoral planning and co-ordination.

II. HEALTH MAPPING OF AIN MEMBERS

A total of forty-two INGOs, members of the Health Working Group (HWG) of the AIN, are highlighted in this report. Collectively they operate in all 77 districts of all 7 provinces.

Figure 1 shows the numbers of INGOs working in each district. Figure 2 is the graph of Human Development Indices—in blue (in an ascending order), plotted against the number of INGOs in each district—in orange. Ideally, the distribution of INGOs across the country would be expected to be based on the level of marginalization, indicated by lower Human Development Index (HDI) numbers²⁰ here. However, Figures 1 and 2 clearly show that is not the case. Kailali and Kathmandu top the list with 18 and 17 INGOs respectively, while Manang and Mustang each have 3 INGOs each, followed by Dolpa and Jumla with 4 INGOs each. On the other hand, there could a number of reasons for such inequitable distribution of INGOs, including: (a) many INGOs rerouted their resources to the earthquake affected districts post-2015; (b) INGOs focusing on preventing and treating communicable diseases work in highly populated areas that are more likely to be urban centers with high HDIs; (c) a number of INGOs work with smaller communities, marginalized irrespective of the HDI of the district they fall under, and; (d) some INGOs provide technical assistance to tertiary healthcare centers that usually tend to reside in high HDI districts.

Figure 1. Map of Nepal with the number of INGOs per district, color-coded by Human Development Indices

20. Nepal Human Development Report: Beyond Geography- Unlocking Human Potential. Kathmandu, Nepal: The Government of Nepal and the UN Development Programme. 2014.

Figure 2. All the districts in an ascending order of their HDIs, plotted against the number of INGOs present

Figure 3 respectively show the number of INGOs in each province. Province 3 has the highest number of INGOs (37), followed by Province 5 (26), while Province 2 has the lowest number of INGOs (16) in the health sector. The disproportionate number of INGOs centered in Province 3 is partially due to the post-earthquake health system strengthening work since 2015.

Figure 3. Map of Nepal with the number of INGOs per province

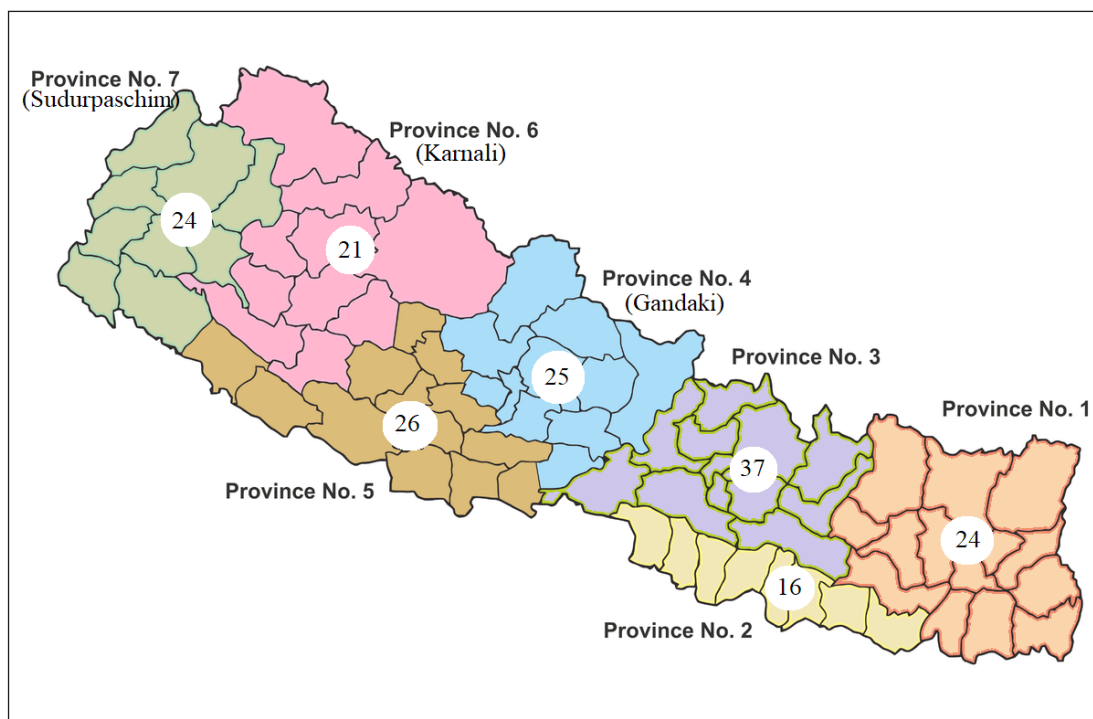

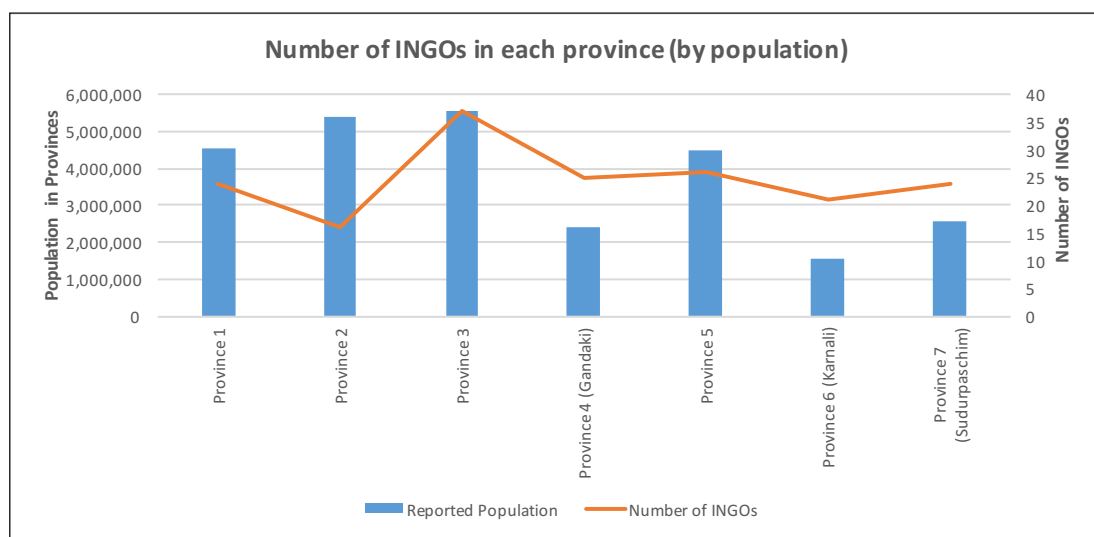

Figure 4 shows the distribution of INGOs with respect to population of each province. The proportion of the number of INGOs and the population in Province 2 seems particularly alarming. Comparatively, Province 2 also has relatively lower HDI index, and 2nd highest population of all provinces. Therefore, increased collaborative work with local and provincial governments, and community organizations in Province 2 to expand the presence of health focused INGOs seems appropriate.

Figure 4. Population versus number of INGOs present in each Province

Financial Contribution of AIN Member Organizations

Just in the last three years, the AIN members highlighted in this report have collectively spent at least NPR 25.75 billion (= NPR 25.75 Arba = US\$ 230 million) in the health sector in Nepal. This averages out to be at least NPR 8.56 billion per year (= NPR 8.56 Arba = US\$76.2 million).

Compared to the national health budget²¹ (NPR 68.78 billion = NPR 68.78 Arba = US\$ 615.4 million) of FY 2076/77 (2019/20), the annual financial contribution of INGOs in health sector of Nepal (NPR 8.58 billion per year = NPR 8.58 Arba = US\$76.7 million) amounts to be at least 12.46% of the total health budget of Nepal. This clearly shows the unwavering commitment AIN and its member INGOs show in improving the health status in Nepal.

21. Poudel A. Health Budget increased marginally, but experts say it's insufficient. The Kathmandu Post. May 30, 2019. Available at: <https://kathmandupost.ekantipur.com/news/2019-05-30/health-budget-increased-marginally-but-experts-say-its-insufficient.html>

Current Realities and Opportunities Ahead

Improving quality and access of health delivery, infrastructure, and as a whole—the health system in Nepal—comes with a unique set of political, cultural and socioeconomic challenges and opportunities. Although not listed in previous iterations of AIN HWG mapping reports, we decided to include the debilitating and encouraging factors in Nepal's health sector, hoping it will help all the stakeholders to collaborate and surgically target the existing problems more efficiently. Below are listed some of the short and long term harsh realities that AIN members already or, are likely to, face:

1. Decentralization of health system under the federal constitution is expected to produce better health outcomes in the long run. However, it has also presented a number of short-term challenges. The coordination among the central government's Ministry of Health and Population (MoHP), its counterparts at provincial governments, and those at the local governments is nowhere near optimal. This is likely to produce myriad bureaucratic hassles, and unexpected delays in launching and operating health projects. Regardless, AIN and its member INGOs are committed to coordinating with the government entities in a supportive role to achieve the health targets across the nation.
2. Lack of skilled personnel, including number of health professionals, inadequately trained community health workers is still a big problem, across the country. Moreover, the delayed realignment of the MoHP staff make it quite difficult for member organisations to smoothly run health projects. Overall, this can also affect the quality of implementation of health intervention projects.
3. Inadequate infrastructure at existing health facilities is a major problem, especially in remote areas.
4. Several municipal governments have realized the urgent need of reliable roads and ambulances for increased access to healthcare in their constituencies, and therefore, have started including them in the respective annual program and budgeting. Nevertheless, the gaps are so deep and wide it could take a long time to sufficiently address it.
5. Existing gaps in the country's supply chain presents another problem for AIN members to effectively address health problems of marginalised communities.
6. The Nepal Health Insurance Board (NHIB) has been operational in more than half of the nation's districts, offering health insurance packages to families. However, serious gaps in financing structure, provider payment mechanism, and its inability to suitably encompass private health sector are some of the areas of improvement for its optimal performance.
7. Deep-rooted cultural taboos and superstitions are plenty in especially rural communities, prohibiting people to access available health services.

Along with difficult issues, the current state of affairs also presents a number of opportunities for INGOs to significantly contribute in improving the overall health system of Nepal, namely:

1. Decentralization of political structure has provided members to work with a total of 761 government entities (including central, provincial and local governments). This allows organizations to allocate resources to marginalized communities and neighborhoods more precisely, and work directly with the communities more effectively. The presence of

local governments has enabled programs to be more contextual and target-specific, thus resulting in efficient use of resources.

2. Because a number of new government entities lack in adequate skilled manpower across various fields of health, INGOs can provide trainings and expertise in helping various health related projects succeed.
3. The NHIB operates toward the eventual goal of attaining universal health coverage (UHC) for all Nepalis. INGOs, along with their network can play a role as a conduit between them and local governments, various communities and other local community organisations toward shared common goals.
4. With Nepal's successes, particularly around maternal and child health in the past, it has a potential in achieving major milestones in health sector, at local, provincial and even at national levels. In doing so, it will not only help bring equity in the health indicators and improve the nation's health status, but also can it present a learning lesson for other low-income economies around the world.

As such, AIN members should not only celebrate successes, but also should constantly introspect aiming for greater efficiency and effectiveness. INGOs should always look out for transdisciplinary, inter-sectoral collaborative opportunities pursuing their respective mission, vision and values, along with those of various government entities at all three tiers. Also, equitable allocation and distribution of resources across geographical areas need to be emphasized, so that they are based on the existing indicators of marginalization.

12	Health Programs/Projects supporting SDGs and NHSS (2016-2020)	<p>FHF has had 5 years formal partnership with SWC, the most recent has been signed in December 2014. FHF's work is guided by the international initiative of VISION 2020. The Right to Sight, an established partnership between the World Health Organization (WHO) and the International Agency for the Prevention of Blindness (IAPB) launched in 1999 with the aim of eliminating avoidable blindness by the year of 2020 and preventing the projected doubling of the avoidable visual impairment between 1990 and 2020. In 2001, Nepal has developed National Action Plan for Eye care services in Nepal Strategic Plan 2002 to 2019, which stands as the national blindness prevention plan, and which guides FHF eye health efforts in Nepal. Above mentioned projects also incorporate recommendations of the mid-term review of the Nepal V2020 action plan undertaken during 2010-2011. The recommendations have been approved by MoH under the Apex Body for Eye Health.</p>

10	NGO Partners	<ul style="list-style-type: none"> • Public Health Concern Trust- (PHeCT/NEPAL)
11	Geographical Coverage (Province and Districts)	Province 3: Kathmandu

12	Health Programs/Projects supporting SDGs and NHSS (2016-2020)	<p>SDG 3 Targets: 3.4, 3.6, 3.8 SDG: 1 NHSS Outputs: 3.1, 3.2.3</p> <p>ReSurge's work most closely aligns to the Leprosy Control Division (LCD). The Ministry of Health has designated the LCD as the focal unit for overall disability, not just those with leprosy. Those disabilities include the "consequences of conditions such as non-communicable diseases, birth defects, injuries from giving birth, infectious diseases, neurological disorders, injuries due to disaster and accidents and conditions that result from the ageing process."</p> <p>Providing free reconstructive surgical care (including therapies for rehabilitation) for burns, other accidental injuries and congenital anomalies is the core of ReSurge Nepal. Our goal is to improve access for the most vulnerable and "unreached population." Nearly 80% of our work is in more remote communities outside Kathmandu; most of our patients have no other access to surgical care because of a lack of finances, combined with the shortage of surgical providers in Nepal. Therefore, ReSurge Nepal aligns with "NHSS Output 3.1. We aim to increase access from 5% to 10% of the "differently abled receiving corrective and reconstructive surgeries."</p> <p>Our work repairing clefts and other congenital anomalies also connects with the Child Health Division's Integrated Management of Neonatal and Childhood Illness (IMNCI) Program's mandate of the "detection and management of disability among children."</p> <p>Moreover, ReSurge's focus on training of health professionals to increase quality care also can align with the NHSS's training goals, including training anesthesia assistants and nurses. ReSurge Nepal would also be interested in partnering with the MoH in its implementation of the Global Disability Action Plan 2014-2021, WHO, in improving access, strengthening and extending rehabilitation, strengthening the collection of disability data to international standards, and supporting research on disability. ReSurge supports the NHSS goal of revising the list of services covered by health insurance system to include "rehabilitation services and specialized surgeries," as this would allow us to collectively increase our impact and help more Nepali citizens have productive and quality lives.</p>
----	---	--

		<p>ReSurge Nepal's work aligns most closely with the SDG 3, ensuring health for all. Surgical care is essential to ensure healthy lives and promote well-being for women, men, and children of all ages. Surgical care addresses infectious conditions, non-communicable diseases (NCDs) and injuries. It is a necessary component of Universal Health Coverage, per WHA68.15. The specific Goal 3 targets that relate to our work are: 3.4, by 2030 reduce by one-third pre-mature mortality from non-communicable diseases (NCDs) through prevention and treatment (cancer, injuries and congenital anomalies fall in the broad NCD category); 3.6: by 2020 halve global deaths and injuries from road traffic accidents (as we provide surgical treatment from accidents); and 3.8: achieve universal health coverage, including financial risk protection, access to quality essential health care services (we provide free care currently and support efforts to expand insurance and financial risk protection). Moreover, improved access to high quality, timely, safe surgical and anesthesia care directly contributes to preventing individuals from falling into extreme poverty, which aligns with SDG 1, ending poverty for all. Improved access to reconstructive surgical care, ReSurge's mission, decreases the number of people denied educational opportunities and the ability to work, by repairing disabilities (congenital and injuries) and giving them a second chance to have a productive life.</p>
